The new autocad design tool includes refinements to the dimensioning tools to make the dimensioning experience more intuitive and empowering for everyone. The Dimensioning Tools are being reorganized into three categories: Markup, Refinement and Layout. The Markup Tools are now the most important set of tools because they make your drawing experience more intelligent, empowering, and expressive. They are set of tools to help you quickly send and incorporate feedback into your designs, and they include some of the most important functionality in Autodesk Revit and Autodesk Inventor. Markup Tools Signal Accept, Color, and Width are now grouped into a Markup category called "Metadata". There's also an annotation type called "Attribute" that helps you quickly add supplemental information to drawings.
